How Anees grades your Arabic

Every lesson goes through 8 steps. Each step was picked by testing it against lessons you graded by hand.

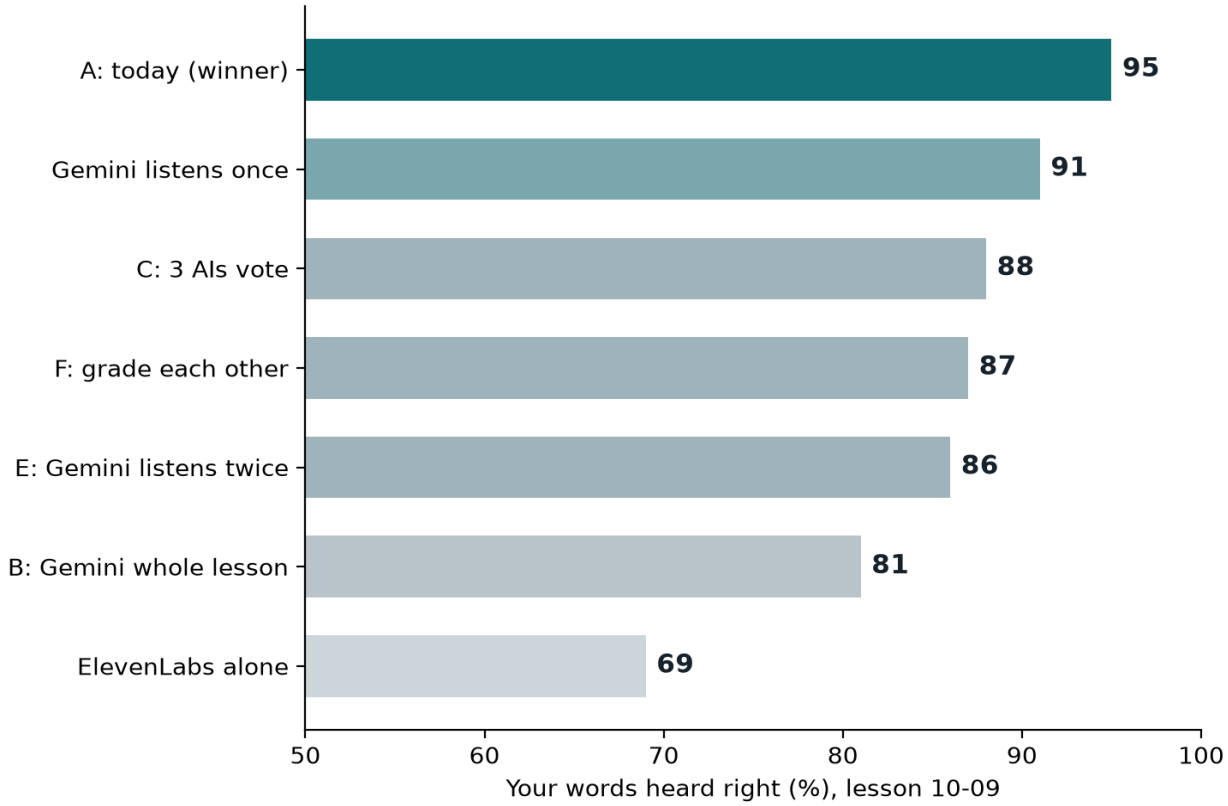

Words used in this guide

Word	Plain meaning
Answer key	Your own full review of a lesson. The "right answers" every method is tested against.
Score	Out of 100. How many of your real mistakes it caught, and how many of its marks were real (fake marks count double).
Held-out	Scored on a lesson the method never learned from. The only honest score.
Reader	An AI that reads the whole lesson and flags possible mistakes.
Judge	An AI that looks at every flag and decides: real mistake or not.
Judge panel	Many readers flag, two judges decide. Our most accurate method.
Hidden mistake	You said it wrong, but the AI wrote it correctly, so your mistake disappears.

Step 1: Hearing your words

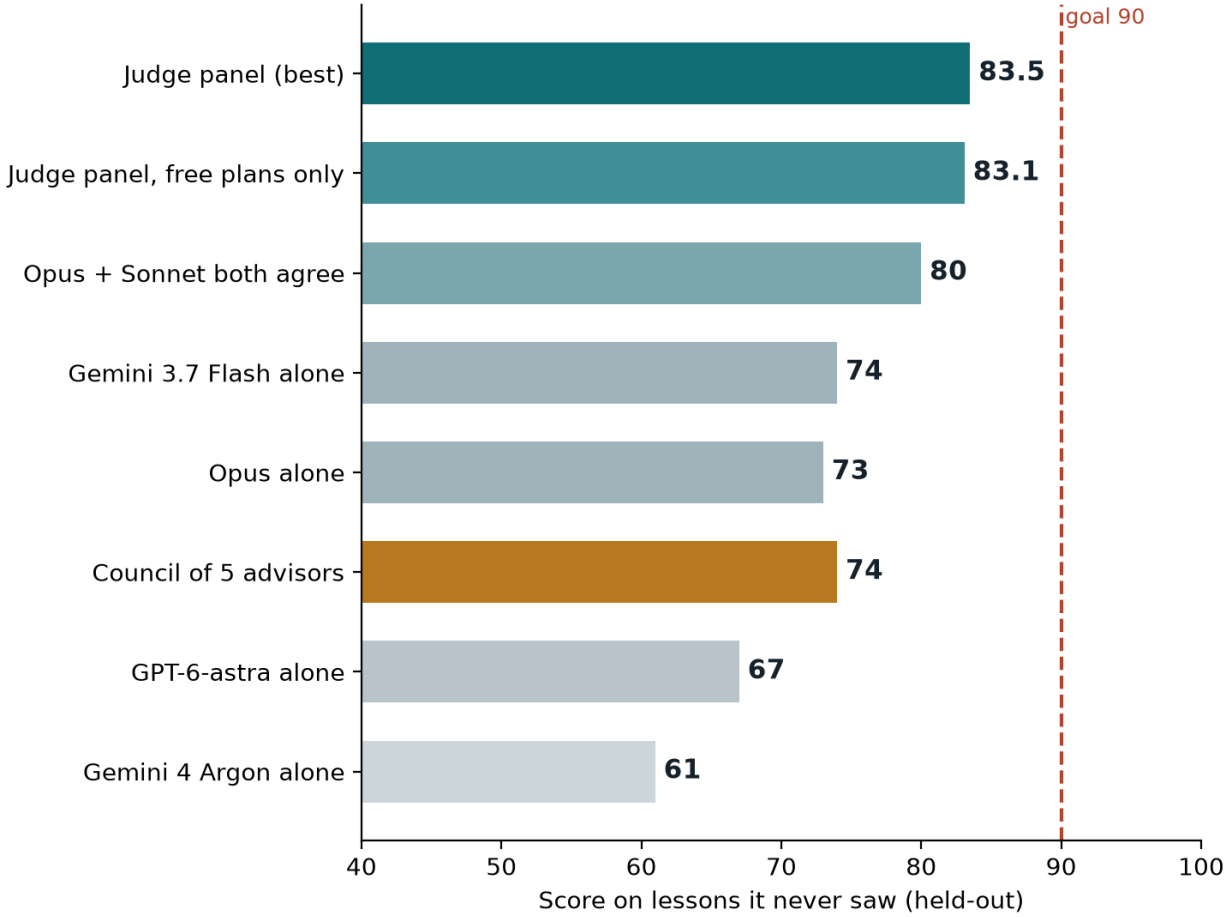

Winner: method A. ElevenLabs writes the lesson, Gemini re-listens to each of your lines 3 times.

Tested on 10-09 and 10-10. Method A won both. It also hid the fewest of your mistakes (1 of 67).

Steps 3-4: Finding your mistakes

Winner: the judge panel. Many AIs flag, two judges keep only the real mistakes.

Free plans only = both judges run on your Claude and ChatGPT plans (Opus + GPT-6-astra); 2 of its 6 readers are Gemini (free once the Gemini tool uses your Google plan).

Every test we ran

Test	Winner	Result
Listening methods A-F	A (today)	Kept
25 Gemini + OpenAI models as readers	Gemini 3.7 Flash	Best single reader
Claude: Fable, Opus, Sonnet, Haiku	Opus / Sonnet	Fable and Haiku dropped
Two readers must agree	Opus + Sonnet	Live until the panel
Judge panel (pool + 2 judges)	Opus + Gemini Flash / Astra	Most accurate
Debate, council, defence lawyer	None	Didn't help
Same model 3-5 times, vote	Opus only (+2.6)	Small help
Short 5-minute slices	None	Didn't help
Codex searching on its own	82.1 (best of 13 tries)	Inside the noise

Rules we learned

Rule	What it means for you	Why
PR-27	"Asked for a word" = half credit, never a mistake. No reaction from Amal = never a mistake.	Matches your grade book
AM-33	Amal's rulings beat every AI and are kept forever.	She found 5 errors in the key
GR-40	Amal's uploaded collocation cards update the verb + preposition rule.	49 to 63 verbs
PR-26	The hourly job can no longer get stuck on a file clash.	481 failed publishes
LS-17	A recording bot that never recorded is skipped.	Oct 14 was stuck 4 days
PR-28	One written method for every lesson; old lessons redone when it improves.	Your request
Rule 7	Your monthly plans first; paid APIs only with your yes.	OpenAI credit was drained

Why not 100, and how a step can change

Limit	Number
Two humans grading the same mistakes agree about	75 / 100
Your own key (Amal agreed with 78 of your 86 notes)	about 90% reliable
Our best method	about 84
Best single lesson	91.5
Smallest difference 99 mistakes can prove	about 4 points

A step only changes when:

#	Check
1	It is tested on lessons you fully graded
2	It wins on a lesson it never saw
3	It wins by more than the noise (about 4 points)
4	It wins again on your next graded lesson
5	Then every old lesson is redone with it

Your part: fully grade 1 lesson in 3. Amal: answer her Tutor page questions.
